

Placing a Fixture or Appliance into a Cabinet

Reference Number: **KB-00605**

Last Modified: **September 20, 2024**

This article also applies to the following legacy products:
Pro | Architectural | Suite

QUESTION

While adding a dishwasher, trash compactor, and other fixtures to my plan, a message sometimes tells me that this fixture or appliance must be placed into a particular type of cabinet. Why does this happen?

ANSWER

One of several messages may display if you try to place a fixture into a cabinet that it is not designed to insert into.

For example, if you try to place cook top into a Wall or Full Height cabinet, a message will state:

- "#272016011 - This fixture or appliance must mount in a base cabinet. You clicked on a full height or wall cabinet."

Similar messages that you might encounter include:

- "#272016012 - This fixture/appliance can't be placed into a blocked cabinet."
- "#272016013 - This fixture or appliance must be placed into a base, or perhaps full height, cabinet. You clicked on a wall cabinet."

In order to insert a fixture or appliance into a cabinet, you must insert it into the appropriate type of cabinet.

Note: Other messages that may occur when working with appliances and cabinets can be found in the [Related Articles](#) section below.

To place a fixture or appliance into a cabinet

1. Select **Build> Cabinet**  from the menu, select an appropriate Cabinet tool, then click in the plan to place it.
2. Using the **Select Objects**  tool, click once on the cabinet to select it.
3. Depending on the fixture or appliance, you may need to enlarge the cabinet to accommodate the fixture/appliance. Resize the cabinet until it is of the required size. If the cabinet is part of an architectural block, use the **Explode Architectural Block**  edit tool to explode the block into separate components.

4. Select **View> Library Browser**  to open the Library Browser if it's not already open, then browse to the appropriate fixture or appliance. Examples of fixtures and appliances that are placed into cabinets include:
 - Fixtures such as sinks.
 - Appliances such as cook tops, dishwashers, and wall ovens.
5. With the object selected, click in the middle of the cabinet to insert it. If a message indicates that the cabinet is not large enough to hold the fixture/appliance:
 - Using the **Select Objects**  tool, click on the cabinet in question, then use the edit handles or the settings in the cabinet's Specification dialog to increase the **Width** and/or **Depth** so that it is large enough to hold the fixture or appliance.
 - Select the fixture or appliance from the library once again and attempt to insert it into the cabinet.
