QUESTION

I would like to create stairs with custom railings. How can I accomplish this task?

ANSWER

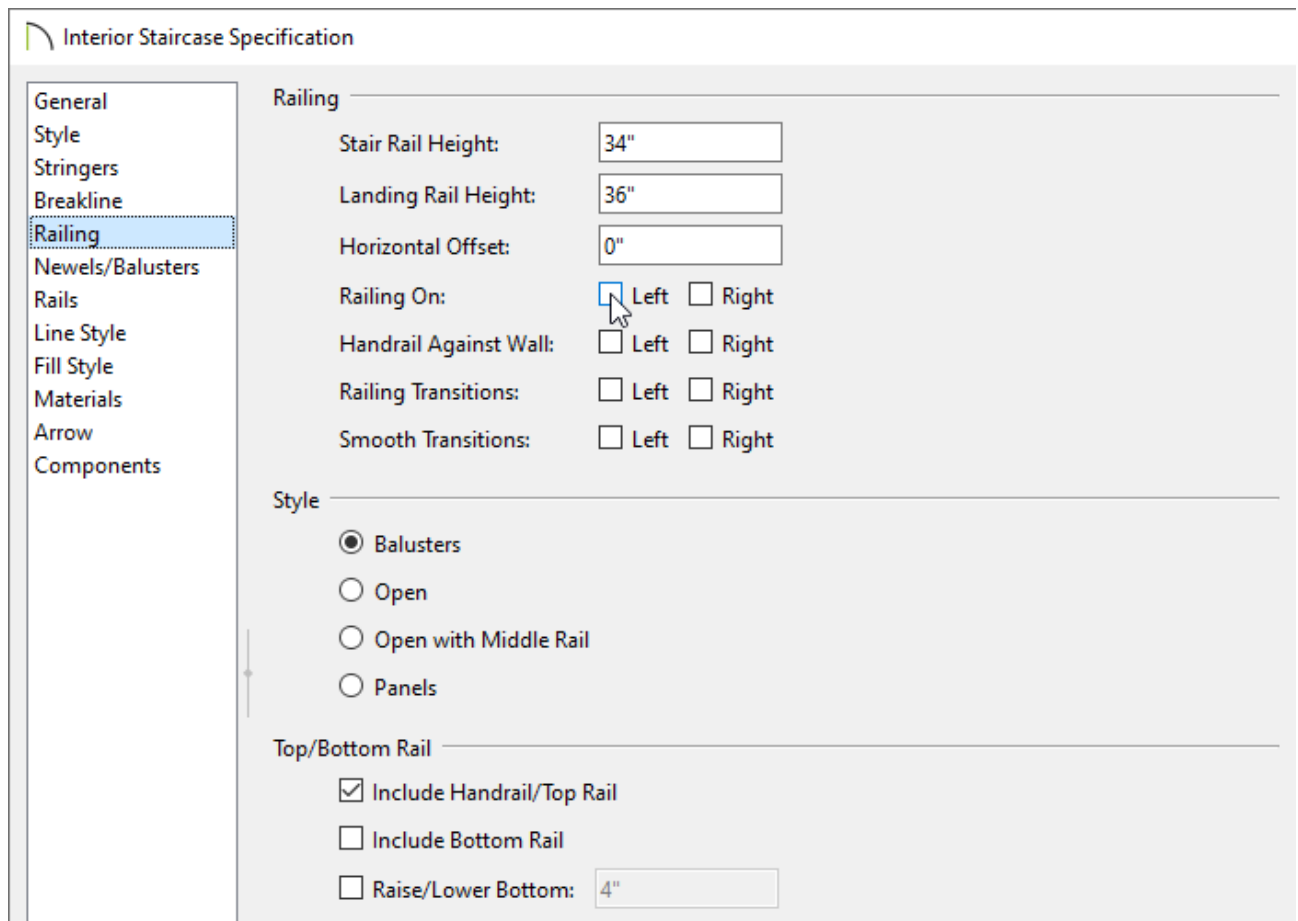

A custom stair railing can be added to a staircase using the Railing tool and setting it to follow the slope of the stairs.

If glass railing panels or cable railings are desired, please see the "Specifying Glass, Cable, or Decorative Railing Panels" resource in the [Related Articles](#) section below.

Drawing stair railings manually

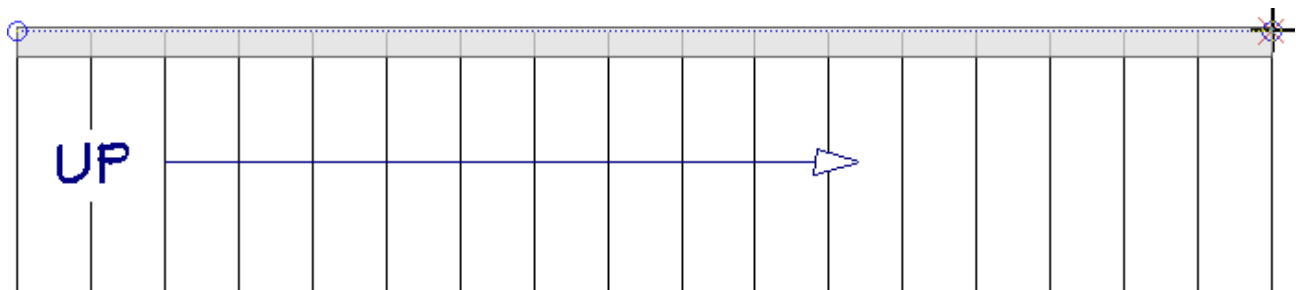

1. Using the **Select Objects**  tool, select the staircase, then click the **Open Object**  edit tool.
2. In the **Staircase Specification** dialog, switch to the **RAILING** panel and uncheck both the **Left** and **Right** boxes next to Railing On, along with Handrail Against Wall, if desired, then click **OK**.

In X14 and prior versions, uncheck the boxes beside Railing On and Railing At Wall instead.

3. Next, select **Build> Railing and Deck> Straight Railing**  from the menu.

4. Draw a railing under the staircase on each side.

5. Select one of the newly created railings and click the **Open Object**  edit tool.

If you have trouble selecting the railing, try clicking where the railing should be and then pressing the Tab key on your keyboard. This will tell the program to cycle to the next object that may exist in the same area.

6. In the **Railing Specification** dialog that displays:

The screenshot shows the 'Railing Specification' dialog box. The left sidebar has 'Rail Style' selected. The main area is divided into several sections:

- Specify Railing:** Includes radio buttons for 'Balusters' (selected), 'Solid', 'Open', 'Open with Middle Rail', and 'Panels'. A 'Horizontal Offset' field is set to '0"'. There is also a 'Specify Railing' checkbox which is checked.
- Newels/Posts:** Includes radio buttons for 'Post to Rail' (selected), 'Post to Beam', 'Post to Ceiling', and 'Rail to Post'. There is a 'Newels/Posts' checkbox which is checked.
- Start/End Posts:** Includes dropdowns for 'Start Type' and 'End Type', both set to 'Auto Post Half (Full)'. 'Start Wall Offset' and 'End Wall Offset' fields are both set to '0"'. There is a 'Uniform Offsets' checkbox which is checked. A 'Square Half Post' checkbox is unchecked.
- Top/Bottom Rail:** Includes checkboxes for 'Include Top Rail' (checked), 'Include Bottom Rail' (checked), and 'Raise/Lower Bottom' (checked) with a field set to '4"'. There is also a 'Top/Bottom Rail' section header.
- Build From:** Includes checkboxes for 'Step Terrain', 'Follow Terrain', 'Generate on Low Platform', and 'Follow Stairs' (checked).

- On the **RAIL STYLE** panel, check **Follow Stairs**.

To learn more about the various options located here, click the **Help** button at the bottom of the dialog.

- On the **NEWELS/BALUSTERS** panel, specify the **Height** of the railing, along with other parameters such as the **Type**, **Spacing**, **Width**, and **Offsets** of the Newels/Posts and Balusters.
- On the **RAILS** panel, adjust the properties for each individual rail that makes up the railing.
- Make any other desired changes to the railing, then click **OK**.

7. Repeat the process with the opposite railing, then take a **Camera**  view to see the results.
