## QUESTION

When I drag a marquee around a group of objects, it selects everything the marquee intersects. How can I change it so that it only selects objects inside of the marquee?

## ANSWER

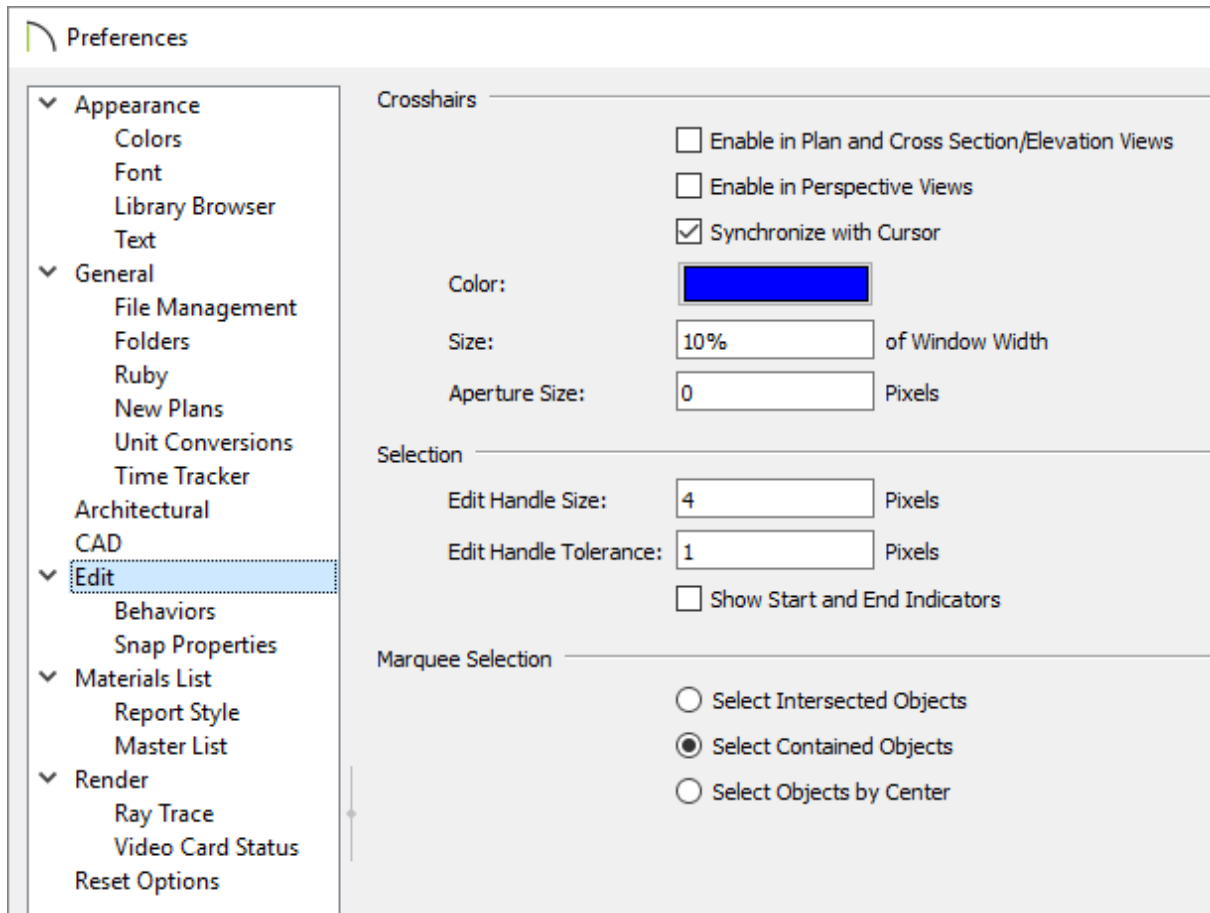

Groups of objects can be selected by holding down the Shift key when the Select Objects tool is active and then dragging a marquee around the objects to be selected.

You can specify whether objects must be totally contained in or intersected by the marquee, or whether an object's center point must be contained in the marquee, in the Preferences dialog or using the Selection Mode toolbar buttons.

To change the Marquee Selection mode

1. From the menu, select **Edit> Preferences**  if you're on a Windows PC or **Chief Architect> Preferences**  if you're on a MAC.

2. Select the **EDIT** panel and under the **Marquee Selection** section, move the radio button to the appropriate setting that you want to use.

- Choose **Select Intersected Objects** to select any objects whose bounding boxes are intersected by or located within the marquee.
- Choose **Select Contained Objects** to select only objects located entirely within the marquee. This option provides the best results in most situations.
- Choose **Select Objects by Center** to select only objects whose center points are located within the marquee.

To make marquee selection easier, you can turn off the display of objects you do not want to include in your selection.

For more information on selecting a group of objects, please see the "Group Selecting Objects" resource in the [Related Articles](#) section below.
