QUESTION

I would like to add curved stairs or add a spiral staircase to my plan. How can I do this?

ANSWER

Curved staircases can be created in Chief Architect using the Curve to Left and Curve to Right stair tools. In addition to these tools, straight staircases can be curved by holding down the Alt or Option key on your keyboard. Spiral staircases are best created using the Spiral Staircase objects located in the library.

To use the curved stair tools

1. Select **Build> Stairs> Curve to Left**  or **Curve to Right**  from the menu, then click once in a floor plan to add curved stairs at that location.
2. To move, resize, or rotate the stairs, click the **Select Objects**  tool, select the stairs, and use the edit handles that display to adjust the stair to your liking.
3. In X15 and newer versions, a **Radius Reference** can be set for curved stair sections, and you can specify a value using the **Radius** input field located within the **Staircase Specification**.

Staircase Information

Staircase does NOT reach next level.
Best fit riser height of 6 3/4" requires 17 total risers to reach 114 5/8" to next level.

Number of Sections: 1
Number of Landings: 0
Number of Risers: 10
Rise Angle: 31.55

To curve a straight staircase

1. Select **Build> Stairs> Draw Stairs**  from the menu, then click and drag to draw a run of straight stairs.
2. Using the **Select Objects**  button, click on the staircase to select it.
3. With the staircase selected, hold down the **Alt** key on your keyboard if you're on a Windows PC or the **Option** key if you're on a Mac, left-click on the top or bottom edit handle located on the staircase, then drag the edge in any direction to curve the staircase.

Note: The Alt/Option key and the right mouse button/action are shortcuts for the Alternate edit behavior. If you would like to enable this edit behavior for the left mouse button/action, navigate to Edit> Edit Behaviors> Alternate.

In addition to the Alternate edit behavior, stairs can be converted from straight to curved, and vice versa, using the Change Line/Arc edit tool.

Multiple stair segments can also be connected to each other. Try placing one stair segment and then creating another from the end point of the first. Once done, curve one of the segments, and notice that the additional, connected stair remains unchanged.

Stairs can also be broken into multiple segments with the **Add Break**  tool. Segments are denoted by their segment number and have separate edit handles for each section.

To place a spiral staircase from the library

1. **Open**  the Chief Architect plan in which you would like to place a spiral staircase, or select **File> New Plan**  from the menu.
2. If it's not already open, select **View> Library Browser**  to open the library, then browse to **Chief Architect Core Catalogs> Architectural> Staircases> Spiral**.
3. Click on one of the spiral staircases to select it.

4. When you move your cursor into the drawing area, it will display the Fixtures (Interior)  icon. Click once to place the selected spiral staircase at that location.
5. Once placed, you can use the edit handles to move, resize, or rotate the staircase as desired.
6. Finally, take a **Camera**  view to see the results.

To create a stairwell, or opening, for your stairs to come up through, please see the appropriate resource located in the [Related Articles](#) section below.
