Last Modified: **July 19, 2021**

The information in this article applies to:

QUESTION

I would like to create a wrapped opening, or doorway, in my plan. How can I accomplish this task?

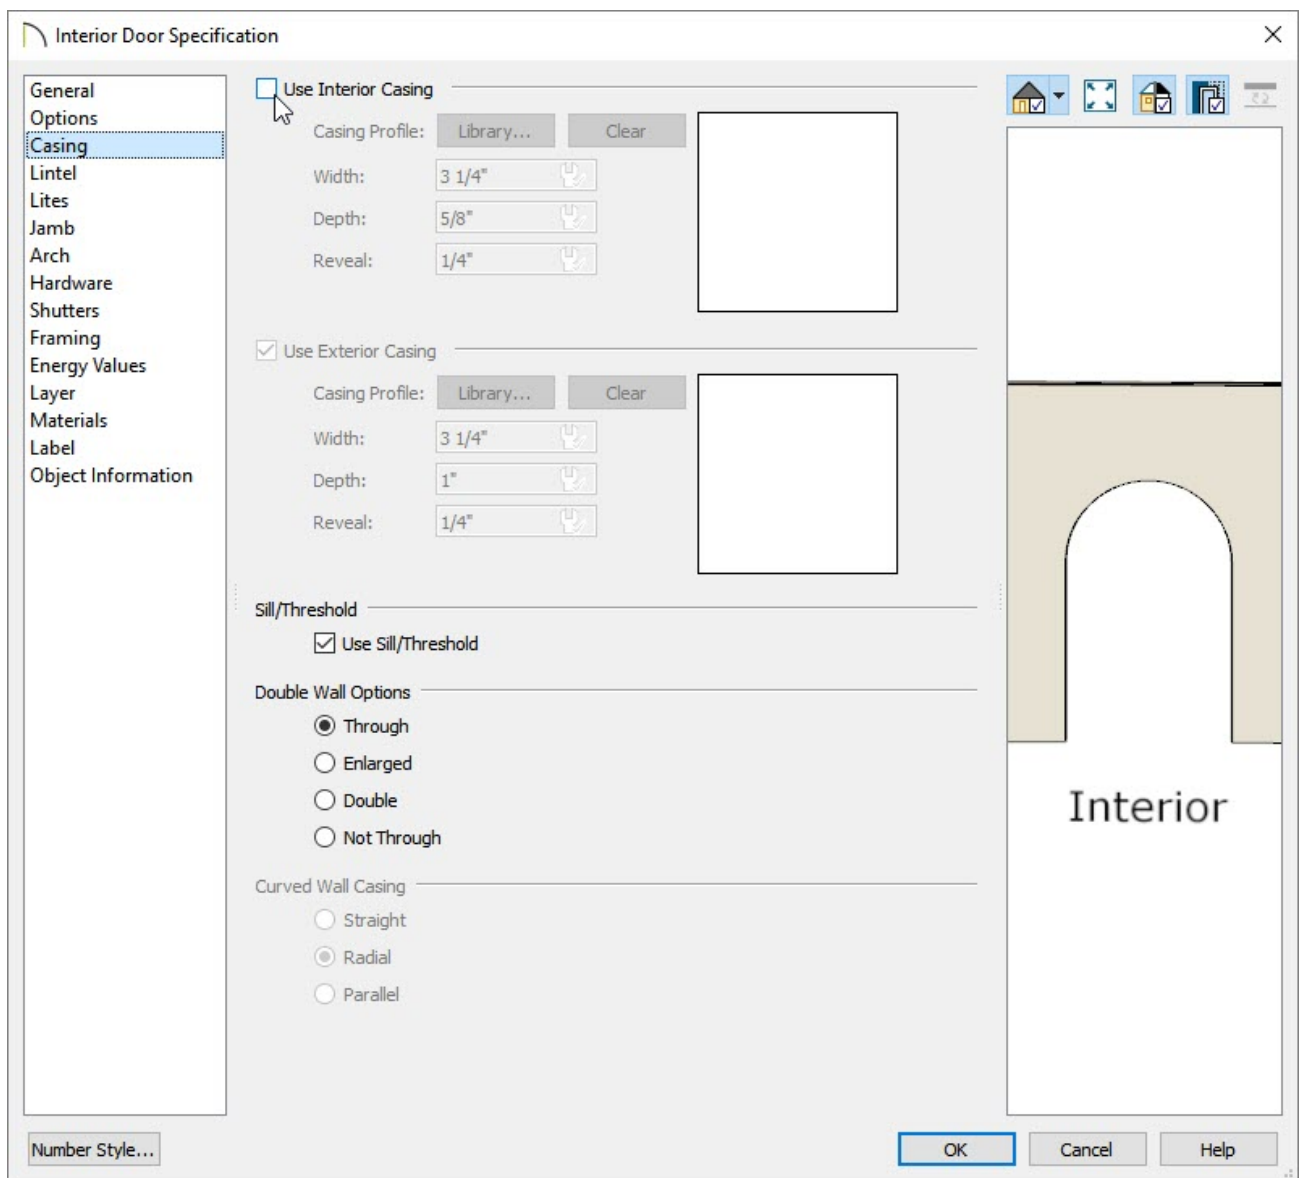

ANSWER

You can create a wrapped opening by placing a doorway and modifying it.

To modify a doorway

1. Select **Build> Door> Doorway**  and click in the wall in which you want to place it.
2. Once placed, use the **Select Objects**  tool to select the doorway, and click on the **Open Object**  edit button.
3. On the CASING panel of the **Door Specification** dialog that opens, remove the check next to the **Use Interior Casing** box, then click **OK**.

4. If room molding is specified on either side of the doorway, create a **Camera**  view to notice that the molding wraps around the interior of the doorway opening.

Note: Wrapped openings of various shapes are also available in the Library Browser by navigating to the Doors & Doorways folder within the Chief Architect Core Catalogs.
