The information in this article applies to:

## QUESTION

How do I specify the on-center spacing for wall framing?

## ANSWER

On-center spacing values can be specified for each wall layer that is defined as Framing within a Wall Type. This provides you full control over various different Wall Types in a plan, including those that may consist of multiple Framing layers.

Before changing the on-center spacing value for a Framing layer, consider specifying a commonly used value for the default stud spacing field located within the Framing Defaults.

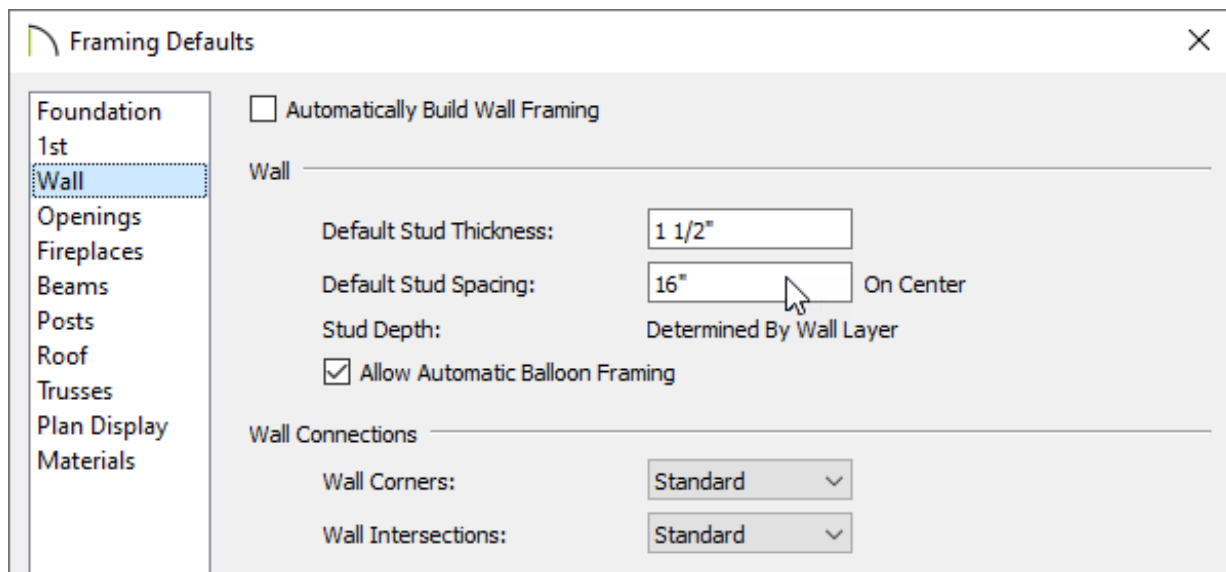

### Setting the default stud spacing

---

When specifying the default stud spacing within the Framing Defaults, wall types will not follow this value unless they have been chosen to do so within the Wall Type Definitions dialog. See Step 3 in the next article section for more information.

1. **Open**  the plan in which you would like to set the default stud spacing for.
2. Choose **Edit> Default Settings**  from the menu, select **Framing**, then click **Edit**.
3. On the **WALL** panel of the **Framing Defaults** dialog that opens, specify the desired **Default Stud Spacing** value.

This value is measured from stud center to stud center.

4. Click **OK** to close the dialog.

## Setting the on-center spacing for a Framing wall layer

1. Select **Build> Wall> Define Wall Types**  from the menu.
2. In the **Wall Type Definitions** dialog:

Wall Type Definitions

Siding-6 New Copy Rename Delete Delete All Unused

Wall Layers

Layer #	Line Color	Line Style	Weight	Material	Pattern	Texture	Fill	Thickness
<b>Exterior Layers</b>								
1			1	Lap Siding				1/2"
2			1	Housewrap				0"
3			1	OSB-Hrz				7/16"
<b>Main Layers</b>								
4			35	Fir Framing 2				5 1/2"

Insert Above

Total Thickness: 6 15/16"

Material Layer

☒ Framing

☐ Use Default Framing Material

Type: Lumber

Stud Spacing: 24"  On Center

Stud Width: 1 1/2" 

Top Plate Count: 2 

Top Plate Width: 1 1/2" 

Bottom Plate Count: 1 

Bottom Plate Width: 1 1/2" 

☐ Max Plate Length: 144" 

☐ Horizontal Framing

Bottom Run Elevation: 0"

☐ Max Girt Length: 144" 

☒ Auto Detail as Insulation

☐ Air Gap

Selected Wall Layer Line

Line Color: ☒ By Layer

Line Weight: ☒ By Layer 35

Line Style: ☒ By Layer Library...

Energy Values

Wall Type: Framed

Cavity R-Value: 21.0

Continuous R-Value: 0.0

Wall Settings

Brick Ledge Depth: 0"

Build Platform to Exterior of Layer: 4 - Fir Framing 2

Dimension to Exterior of Layer: 4 - Fir Framing 2

Foundation to Exterior of Layer: 4 - Fir Framing 2

Foundation Offset: 0"

☐ Partition Wall

- Select a wall type that you would like to modify using the drop-down menu in the top left corner.
  - Select one of the wall type's framing layer(s) by clicking on it within the Wall Layers table.
3. If it's not already checked, check the **Framing** box located under the Material Layer section.
- Specify the desired **Stud Spacing**.

In X13 and newer versions, select the **Use Default**  icon if you would like the stud spacing of this wall layer to follow the Default Stud Spacing value located in the Framing Defaults.

In X12 and prior versions, these properties are part of the framing material that is chosen for the wall layer.

- Other framing properties can also be specified here. For more information on these other fields, please see the [Related Articles](#) section below or refer to your program's Help documentation.

4. Click **OK** to close the dialog.

The next time you build wall framing in this plan, any walls using the wall type you just edited will use the stud spacing that you specified.
