The information in this article applies to:

QUESTION

The opening indicators that I see displayed on my cabinets in an elevation view indicate that my cabinet doors are opening to the right, but I want them to open to the left. How can I change this?

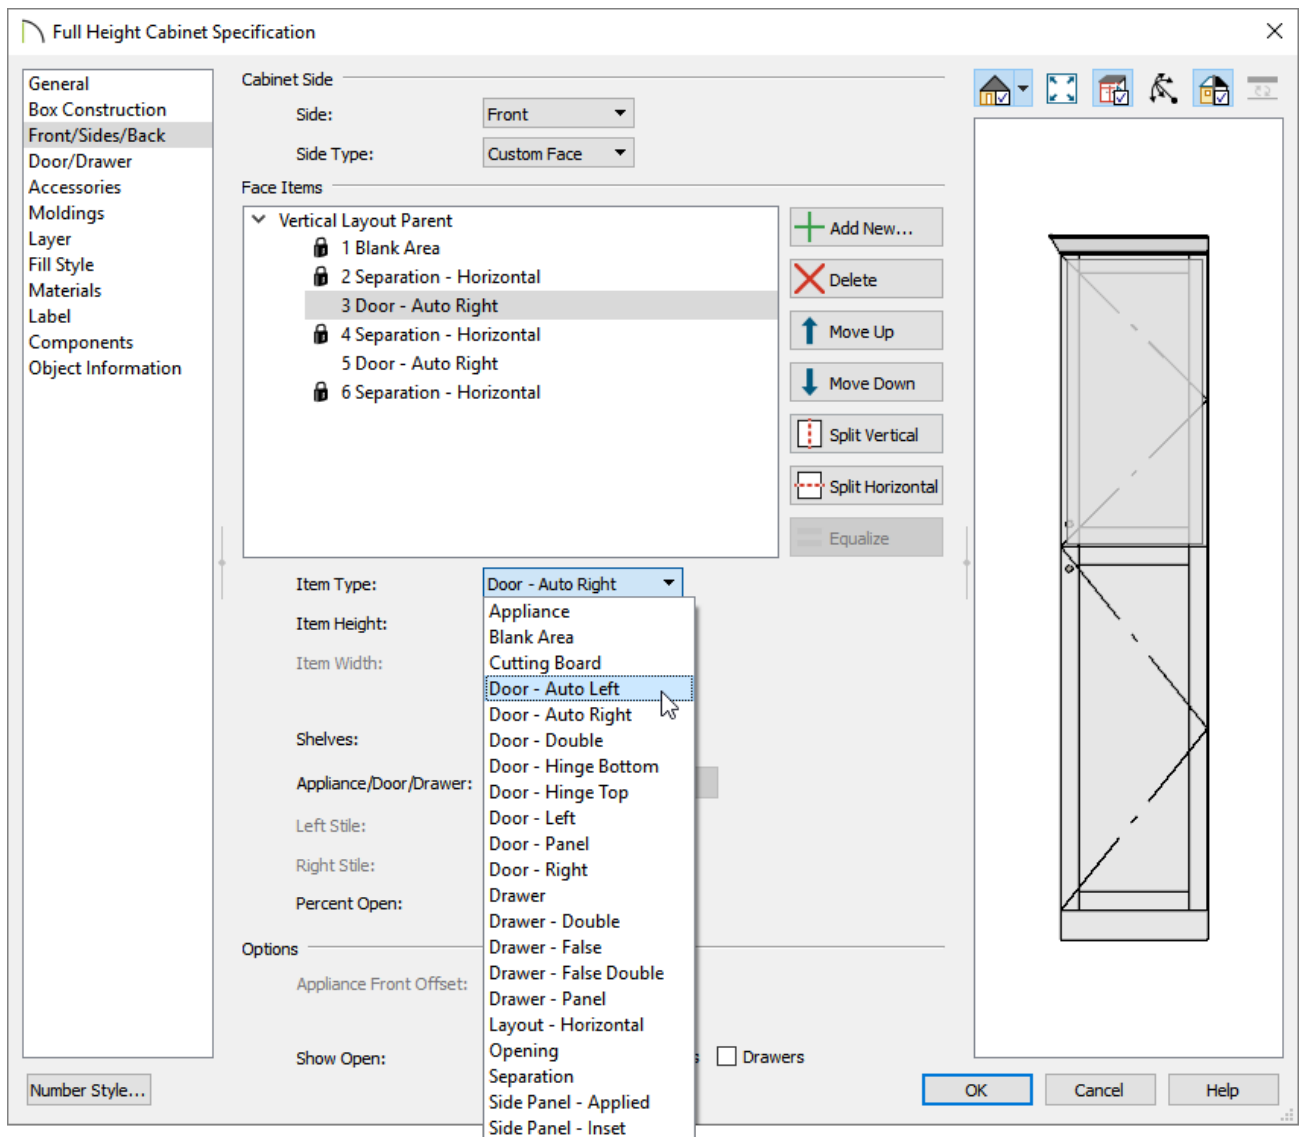

ANSWER

Changing the way a cabinet door opens is easy to accomplish in its Specification dialog.

To change the way a cabinet door opens

1. Using the **Select Objects**  tool, click on the cabinet you want to change.
2. Next, click on the **Open Object**  edit tool.
3. In the **Cabinet Specification** dialog that opens, click on the cabinet door you want to change within the 3D preview to highlight it.
4. On the **FRONT/SIDES/BACK** panel, and with the cabinet door selected, use the **Item Type** drop down menu to change the door to reference either the left or right direction, depending on how you want the door to swing.

Note: The Auto Right and Auto Left options become double doors when a cabinet's width is greater than 24" or 600mm. The Left, Right and Double options always display as specified, regardless of the cabinet's width.

5. Click **OK** to apply the change.
